# WELCOME TO WEERAN ANGUS

Dear Cattle Breeders

Happy New Year to you all and we hope 2025 is a year that is kind to you and your family, and the seasons and prices are on our side!

Having just attended the start of the weaner sales in Hamilton, it is a credit to all producers on the cattle that were presented for sale. It has been the toughest season that has been experienced by the area in our time in farming! To see the condition of the cattle, their health and the way they were presented was a credit to the breeders. Congratulations! It was great to see the number of buyers on the rail. You have to travel a long way from Hamilton before you find any feed, so it was pleasing to see the support shown by many.

We learnt a lot with the feeding of our stock last season, and we will again plan for containment feeding with the sheep and cattle.

54 sales coming up for the Weeran Angus Team! An exciting time at Weeran! It is our belief, given an improved seasonal outlook that beef cattle are on the cusp of greatly improved market conditions. The difference between north American and Australian beef values will improve, giving our industry their day in the sun! Now is the time to maintain a productive female base so you can harvest the good times which are just around the corner!

Our herd focus is unwavering . . . with a focus on calving ease and carcass with as much growth and maternal traits

that we can make use of in our own environment. Adding outstanding temperament, goes a long way for increased production and work safety. This catalogue is packed with calving ease, with 39 heifer bulls.

Our new reference sire Sterling Pacific has kicked goals in the program. He is a powerful sire with top 1% growth data, coupled with excellent feed efficiency. Another bull well represented is Myers Fair N Square who is an outcross sire with extra shape that the industry is always looking for.

A catalogue full of Sire Verified bulls is something we are very proud of. This means the bulls we are selling you are 100% guaranteed to be the sire we say they are! To achieve this, extensive genomic testing is undertaken to make our data accurate.

Our bull sale will be held on property and online with AuctionsPlus for this sale. All bulls will be on display and our auction will be run by video in our Woolshed beside the display yards.

We invite you to come and inspect the bulls at our Beef Week Field Day on Wednesday 29th January. We look forward to welcoming you to our 54th On Property Bull Sale on Tuesday 25th February.

Kind regards  
Alec & Jo Moore and the Weeran Team!

## **H HEIFER BULL SELECTION CRITERIA**

**There are 39 heifer bulls in this catalogue.** Heifer bull recommendations are the combination of Calving Ease EBV's, Birthweight EBV, pedigree history and actual birthweight, which gives us confidence to recommend them for heifer matings!

It is not an exact science, but a recommendation!

## **DELIVERY REBATE**

### **WE ARE MAKING CHANGES TO THE DELIVERY OF ALL SALE BULLS!**

We would like to offer all purchasers a **rebate of \$100** per bull to organise pick up of their own bulls within two weeks. For those who don't organise their own transport, there will be a charge of \$100 per bull up to 500 kms, for transport to be organised. It is our intention that all bulls will be delivered within two weeks.

**We will organise loads to the same districts to make it cost effective.**

**ALL SALE BULLS COMPREHENSIVELY GENOMICALLY TESTED**

# HEALTH STATUS FOR ALL SALE BULLS

1. Semen Quality Tested
2. Drenched and 7 in 1 Vaccination
3. Two Pestigard Vaccination and Two Vibrovax Vaccination to all Sale Bulls
4. One Bovi-Shield MH-One
5. One Rhinogard IBR Intra-Nasal Spray

## SEMEN RIGHTS

Weeran retains semen rights on all sale bulls for use in our Weeran Herd. If required, Weeran will organise and collect semen at our expense and at your convenience.

## GENETIC CONDITIONS

All sale bulls have been tested for known genetic conditions, and results are printed in the catalogue. For further information, please refer to Angus Australia website...  
[www.angusaustralia.com.au](http://www.angusaustralia.com.au)

## COMPREHENSIVE GUARANTEE & SUPPLEMENTARY CATALOGUE INFORMATION

IF YOU EXPERIENCE ANY PROBLEMS, PLEASE MAKE SURE WE ARE THE FIRST CONTACT TO ENSURE WE CAN HELP YOU!

Visit [www.weeranangus.com.au](http://www.weeranangus.com.au) for full details

## IBMS GTS GRADING

### IBMS GENETIC TYPE SUMMARY (GTS)

All Weeran bulls have been assessed on the GTS Type/Structure system. All the bulls in the catalogue are considered acceptable for soundness and muscling. The GTS system has been broken up into two distinctive trait groups.

### DESCRIPTIVE TRAITS

**Stature** - Evaluation of bulls for frame size. A maturity pattern 25 is an average frame bull. This may be influenced by age of dam, particularly first calf heifers.

**Capacity** - Bull evaluation combines depth of fore rib along with spring of rib and width of chest floor, as well as depth of flank. Scores greater than 25 indicate larger capacity.

**Body Length** - Evaluation of body length from withers to pins. Scores greater than 25 indicate longer body length. Muscle - Scores higher than 25 indicate above average muscle.

**Doing Ability** - Ability to lay fat relative to their peers under common management system.

**Muscle Score** - Is the muscularity of the bull devoid of subcutaneous fat. Higher scores indicate animals with higher yield attributes.

Scores : 25 = C muscle    30 = C+    35 = B-    40 = B    45 = B+

**Sheath** - To maximize a bulls effective servicing of cows the sheath needs to be 'tight' and parallel with the underline. The navel must not be too expressive. Scores: 5 = Excellent: very tight, parallel with underline, very little navel.

4 = Very Good: tight, almost parallel with underline, slight navel.

3 = Acceptable: not so tight, angle increasing, some navel.

2 = Undesirable: pendulous, increased angle, navel very evident.

1 = Very Undesirable: very pendulous, too much angle, too much navel.

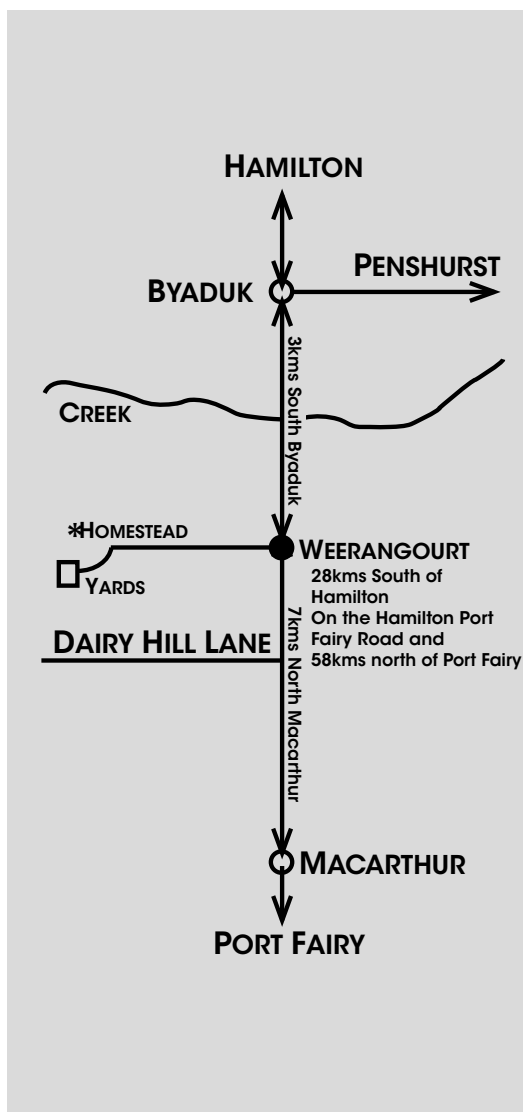

### STRUCTURAL SOUNDNESS TRAITS

The system is aimed at being as simple as possible. All structural traits (front and rear feet, rear leg angle and pastern scores) are presented in the same format. A score of 5 is optimum. Scores of 4 or 6 represent a slight variation from ideal.

These animals would be acceptable in most breeding programs. Scores of 3 and 7 have a larger variation from ideal, but would be acceptable in most commercial herds, but seedstock producers should assess these animals carefully. Scores of 2 or 8 are low scoring and should be carefully evaluated prior to purchasing.

Bulls scoring outside these scores should be considered culls and not catalogued for sale. Structure scoring is only given to give potential purchasers a guide, it is not a guarantee of the lifetime structure soundness of an animal. Many thanks to Dick Whale for assessing all sale bulls. WEERAN GUARANTEES!

**OVERALL GRADE - 7 excellent, 6 very good, 5 good, 4 average, 3 and below are not acceptable to be in sale.**

Myers Fair-N-Square was brought into the program to improve body shape and feed efficiency. He has produced cattle which are as thick as a bluestone block and yield for carcass weight which surpasses expectation. He was also tested using the igenity genomic test and has excelled for tenderness, marbling, and carcass weight. He has been used in 76 herds with 664 progeny.

Mainland was purchased in 2021 in syndication with Bull Oak Well & Mandayen Angus studs. He has an outstanding phenotype with faultless structure, a real athlete. His data set is outstanding combining calving ease with a top 7% growth curve, top 2% scrotal, top 3% eye muscle area. Mainland sired the top priced bull at our 2024 Autumn bull sale. Dick Whale has also had him tested genomically using the 10 trait igenity beef profile system where he has excelled for tenderness with a top score 10/10 along with very good results for marbling 9/10 and carcass weight 9/10. He has been used in 13 herds with 473 progeny.

The Witherswood Dispersal sale in 2018 gave the industry access to some top genetics. We have been delighted with the donors selected to join our program and to see one of our donors progeny in our reference sire list, Witherswood Bronc! He was 8 weeks old when we spotted him at the dispersal sale and he has grown into a magnificent sire. Bronc has a very balanced ebv graph for calving ease, growth, carcass, indexing and structure. A great allrounder who consistently delivers. Bronc sired the top priced bull at the 2023 Autumn Bull Sale. He has 251 progeny in the Weeran herd.

Quambatook was a high selling son of Numurkah purchased at Dunoon Angus in the spring of 2021. He combines our mantra of calving ease & carcass with exceptional phenotype. A large framed bull with a very good growth curve, feed efficient with carcass.

WITHERSWOOD BRONC P0197

WAITARA QUIDDITCH Q43

ADDITIONAL REFERENCE SIRE INFORMATION CAN BE FOUND ON  
[WWW.ANGUSAUSTRALIA.COM.AU](http://WWW.ANGUSAUSTRALIA.COM.AU)

## 1. UPON ARRIVAL:

- a) Ensure your new bulls socialise with a group of animals, (anything except other bulls) in the yards, when they arrive.
- b) Run the new bulls with a small group of empty females, (he has come from a different herd and may not have had exposure to some of the normal pathogens present in your herd – see further information below).
  - i. **This MUST be done with the empty females, for a period of 2 to 4 weeks.** Ideally the bull can then be rested for 6-8 weeks prior to joining.
  - ii. **Ideally give the cows prostaglandin every 2 weeks so they continue to cycle.**
- c) Ideally bulls should be insured for their first year as standard.

## 2. PRE-JOINING:

- a) We recommend a breeding soundness examination (BSE), including structural assessment, testicular palpation, service ability testing and semen testing (essential in single sire matings). This is mandatory for second joining and older bulls each year. It will improve the fertility performance of the herd, by removing infertile bulls from the joining group. If bulls are not service tested it is essential that you observe the bulls serve in the first week of joining.
  - i. These bulls will be given a risk rating and mating potential which will influence joining bull teams.
- b) **Keep vaccinations up to date;** Vibrovax, Leptospirosis 7-in-1, Pestigard and an annual drench, 4-6 weeks prior to joining.

## 3. JOINING - new bulls have the highest risk of breakdown in the herd, this risk can be reduced by:

- a) **PROTECT a new bull by not over-joining, 30 females per virgin bull maximum.**
- b) **Recommended to multi-sire join.**
  - i. Ideally mixing bulls of different age groups, experience levels and risk ratings.
- c) **It is recommended, IF single sire joining with a new bull, to rotate him with a proven bull for at least one cycle. Also, it is good practice to rotate proven bulls for the last cycle with all new bulls.**

**“Most new bull fertility issues develop or are acquired during the joining period, rather than being pre-existing problems.” This means that bull observation during the joining period is essential!**

### **ONCE THE JOINING PROGRAM IS SET UP, MONITORING IS ESSENTIAL TO IDENTIFY ISSUES AS THEY DEVELOP.**

Your new bulls need to be run in mobs that are easily monitored, keep them close to promote observation, check them 2 to 3 times a week for the first three weeks and then weekly thereafter. This involves looking for,

1. The bull serving, (this has not been successful until the bull thrusts). If bulls are continually mounting without serving it is often a sign the bull has developed a penile infection and needs to be rested and replaced immediately. Sound bulls should serve every 1 to 2 mounts.
2. Lameness.
3. Evidence of penile or preputial swelling or inflammation.
4. Signs of ill health, lethargy, etc.
5. Estimate the number of females cycling, (for every 20 females, one cycles each day at the commencement of joining). After three weeks of joining, there should only be one cow cycling every three days in 20 females.

#### 4. POST-JOINING:

- a. **Annual breeding soundness evaluation is a non-negotiable procedure.**
  - b. Good management of bulls is a year-round procedure.
    - i. Keep bulls in working body condition – they should be in body condition score 3/5 at the start of mating, which will involve removing weight following the joining period.
    - ii. Manage bulls in groups of joining teams to establish stable social hierarchies and minimise bull fighting.
- ✓ Bulls need to be removed from the cows at the same time, to help create their bull mobs. This will limit the number of potential injuries by reducing the number of bull interactions.
  - ✓ Bull paddock management is very important to minimise injury between joinings. The bulls need enough room to reduce fighting, restricted feed and water will increase interaction. Paddocks will require co-grazing with sheep, or crash-grazing by other mobs to manage feed quality and quantity on offer for the bulls.
  - ✓ The target between joining is to restrict weight gain in older bulls to prevent breakdowns. Ideally young bulls have access to a higher level of nutrition as they continue to grow.
  - ✓ Early pregnancy testing is essential for good female management and detection of failures. The earlier the pregnancy testing is undertaken, the more likely the cause of the problem will be identified. This will not only give you early notice of the problem but also help in formulating a plan to help reduce the chance of the problem occurring again in the future.

#### **PENILE INFECTIONS IN BULLS – “Balanoposthitis”:**

Penile infections are a common disease in young bulls during their first joining season in any new herd. Mitigating the risk of this disease as outlined above is essential to reduce the number of breakdowns and optimise bull cost per calf.

These infections are caused by a range of bacterial, viral, and other organisms (“pathogens”). The genital form of infectious bovine rhinotracheitis (IBR; herpes virus) is commonly implicated. The issue is that any given property has its own population of reproductive tract pathogens and if the new bulls make their first contact with these pathogens at the time of high workload (such as joining) they are at a high risk of developing a penile injury.

These injuries typically involve a reddened inflamed penis, developing to ulceration and pustules. Some bulls will stop serving due to pain (will continue to mount, but not serve), but other high libido bulls will continue to serve and create significant inflammation commonly leading to preputial tears, abscesses and prolapses. These are often perceived to be a “broken penis”, and **IF treated promptly may regain normal function!**

Treatment involves prompt removal of the affected bull from the joining mob, sexual rest (typically for the remainder of the joining) and treatment with antibiotics and anti-inflammatories. Preputial prolapses require surgical reduction.

If undetected these injuries commonly cause a significant decrease in pregnancy rate and commonly result in permanent infertility in the bull. **Observation and intervention are essential!**

Prevention of this condition is best achieved as outlined above, by deliberate pre-exposure of new bulls to a small number of females (low workload) well before the joining so that they are exposed and can develop immunity to the herds’ pathogens prior to the high workload of the joining period.

Positive fertility outcomes are a significant driver of profitability in beef breeding enterprises, but this requires informed and active management!

HVC Production & Breeding.

# ANGUS AUSTRALIA EBV'S

BIRTH			
<b>Calving Ease Direct</b>	(%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Calving Ease Daughters</b>	(%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
<b>Gestation Length</b>	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
<b>Birth Weight</b>	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.
GROWTH			
<b>200 Day Growth</b>	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.	Higher EBVs indicate heavier live weight.
<b>400 Day Weight</b>	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
<b>600 Day Weight</b>	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.
<b>Mature Cow Weight</b>	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
<b>Milk</b>	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.
FERTILITY			
<b>Days to Calving</b>	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
<b>Scrotal Size</b>	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.
CARCASE			
<b>Carcase Weight</b>	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
<b>Eye Muscle Area</b>	cm <sup>2</sup>	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
<b>Rib Fat</b>	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Rump Fat</b>	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
<b>Retail Beef Yield</b>	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
<b>Intramuscular Fat</b>	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.
FEED EFFICIENCY			
<b>Net Feed Intake (Feedlot)</b>	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.

A very impressive HBR embryo by Sterling Pacific out of donor dam Stonepoint Bluebell P020. U27 was used in the Weeran program over T drop cows. A very sound, well muscled, long bodied bull with an excellent data profile. A huge growth curve, with a very impressive 12 ebv's in the to 20% for the breed and scoring a top grade 7 by Dick Whale. Sterling Pacific has a great temperament and is breeding very consistently with good structural soundness. U27 is a flush brother to Lot 11 VHW23U21.

Alec describes U36 as an absolute tank with huge capacity and thickness . . . a damn good bull! A HBR ET son of Sterling Pacific out of donor dam Stone Point Zania N306 who has 16 progeny to her name, and one sale bull already. Used over 3 and 4 year old cows in the Weeran program. Huge growth, large frame with a very good soft muscle pattern and top grade 7. A good set of coconuts under him with a scrotal ebv to match.

The first of the Mainland sons in this sale. Mainland has been very successful in the Weeran program. U51 is a large frame APR bull who is athletic with a good muscle pattern and was used over mature cows in the Weeran program. He is a real power bull with massive growth in the top 1 and 2%. He has good calving ease ebv's for that growth and birthweight. He is feed efficient with an excellent carcass weight being in the top 1%. RBV and EMA are both very good.

Witherswood Bronc has been a consistent performer in the Weeran program, topping many bull sales with his progeny. Leah's favourite sire! U143 is the 15th sale bull to go up for auction sired by Bronc. That is a stat in itself! U143 is a HBR son, deep bodied, heavily muscled, with terrific capacity, very sound footed, and strong down the backline. He has an excellent temperament. He has an outstanding growth curve all in the top 5%, with top 15% scrotal ebv and a big set of balls at 45cm to back it up. He was used in the Weeran program to back up the T cows ai program.

The first Myers Fair N Square in the younger bulls being offered. Myers F N S has been brought into the Weeran program as an outcross sire with extra shape. He ticks a lot of boxes for growth, carcass and docility. U351 is a very nice quiet son of Myers Fair N Square who is heavily muscled, sound footed with a good capacity. Excellent growth all in the top 5% for the breed, with good docility, fertility, and excellent carcass weight. Indexing is all in the top 21%. Grading very well with a 6.

Fair N Square certainly puts shape into his progeny. U425 has a nice slick skin and smooth muscle pattern. An attractive son of Fair N Square and P343. A nice growth curve with a b/w of 5.0 to a 600 day of 142 which is in the top 13% for the breed. 200 and 400 day are also both very good. Milk is top 11%, scrotal very good, and Carcase Weight.

Myers Fair N Square and Wattletop Kiwi have produced a powerful growth bull. M433 has produced three male calves and her first two have made bull sale quality. We will watch her V male calf come up through the program with interest. Plenty of power with 400 and 600 day growth both in the top 4% of the breed and combined with feed efficiency and very good carcase weight. Pretty handy indexing as well.

A Herdbook registered Witherswood Bronc son out of a Coolana Erica cow who has produced 8 calves. A GTS Grade 6 bull with above average frame and body length, combined with a very good muscle pattern. He has a good growth curve with very good growth EBV's, with impressive net feed efficiency and both carcass weight and RBY in the top 1%, with a good EMA.
