Welcome

We're delighted to invite you to the 22nd Annual Landfall Spring On-Property Auction, where we're proud to present 161 performance-recorded two-year-old bulls and 139 yearling bulls.

This year's offering features sire lines Landfall New Ground, Te Mania Rhynie, Rennylea L519, Millah Murrah Paratrooper, and Baldrige 38 Special.

After two patchy springs and below-average rainfall through summer and autumn, many southern herds have seen a reduction in numbers. Encouragingly, strong demand for beef and limited cattle supplies in the south have triggered signs of a market rebound. We're hopeful that the coming season will be plentiful, offering an opportunity to restore momentum after consecutive challenging years.

It is with great appreciation and a heavy heart that we farewell Annette Coonan from the Landfall team. For the past eight years, Annette has been the backbone of our catalogue development. It's been a privilege to work alongside her—and an even greater one to get to know her. We thank her deeply and wish her all the best as she retires from a distinguished career contributing to the Australian cattle industry.

We extend our sincere thanks to our dedicated Landfall staff, family members, and associates. Your unwavering commitment is central to everything we do.

We also thank you—our clients—for your continued support of the Landfall Angus program. Your partnership shapes Landfall into what it is today, and we're truly grateful for each of you.

We warmly welcome inspections of the sale offering and the wider Landfall herd anytime in the lead-up to auction day.

Regards,

The Archer Family

About Landfall Angus

Landfall Angus is a family owned and operated business located in the Tamar Valley in Northern Tasmania. Our cow herd consists of over 3500 registered females, making Landfall one of the largest Angus Seedstock herds in Australia.

Landfall Angus cattle perform well in the natural environments of Australia, a direct result of our strong focus on the commercial realities of beef production. The Landfall Angus cow herd is fertile, functional and high performing. Careful genetic selection and improved production management techniques ensure that Landfall is a leading Seedstock herd and producer of Angus genetics in Australia.

HISTORY

Landfall Angus was established in 1948 with the purchase of twelve females from the Australian mainland. The original Landfall cows were selected for their large frame and femininity. Sires from “Naranghi” in New South Wales, at that time bred by Mr. John Bott, were consistently breeding progeny that excelled in fertility and growth. They complimented the Landfall cows very well and these sires were used for 20 years.

In the early years of breeding bulls a small number were sold privately to regular Tasmanian and King Island clients. From 1975 an annual auction has been held offering bulls and females. In 2004 a spring sale was introduced and is held annually on property offering bulls.

We supply our clients with high quality Angus genetics that are fertile, structurally sound, easy doing and low maintenance without compromising the importance of growth and carcass performance.

TODAY

Landfall Angus is today owned and managed by the fourth and fifth generation of the Archer family. The Landfall herd now consists of over 5000 registered animals running over two main production centres in the Tamar Valley, calving in excess of 3500 registered females. In 2022 we incorporated a co-operator herd in the New England of NSW.

Across all production centres, the Landfall herd is run under commercial conditions, in large contemporary groups. Artificial insemination and embryo transplant are used to increase the rate of genetic gain in our herd. Strict criteria is used for the selection of sires and dams within our breeding programs.

A strong emphasis is placed on the traits that contribute positively to the commercial profitability and sustainability of beef production. Firstly we aim to breed a functional female, focussing on structural soundness, docility, fertility and calving ease. Animals are joined for restricted periods resulting in short calving periods. Any animal not meeting the criteria is culled. The focus then moves towards growth and carcass quality with targets set above breed average whilst avoiding extremes. All registered animals are performance recorded with Breedplan and Landfall has been a member of Angus Breedplan since its inception in the early 1980's. Data is collected from animals run in large groups allowing us to directly compare genetics without the impact of environmental differentiation.

Annual sales are held on property in the Autumn and Spring, along with paddock sales throughout the year.

OUR GOALS AT LANDFALL ARE:

1. To provide our clients with superior genetics to help them achieve a sound investment and help to improve their bottom-line.
2. To produce genetics which perform well under the natural environments of Australia.
3. To have relationships of high integrity with our clients.

Sale Notes

1. Location

8 kilometres from the centre of Launceston, North on East Tamar Highway. Follow A8 towards Georgetown.

See page 115 for map and travel information.

2. Rebates

4% rebate commission offered on all bulls to agents settling within 7 days of invoice.

All purchasers must nominate their agent 24hrs prior to the sale with Nutrien Livestock.

Please email

livestocktas@nutrien.com.au or frank@landfall.com.au

3. Freight

Free freight on all bulls to Melbourne, Grassy and Lady Barron ports for lots sold by auction. Free freight on all bulls within mainland Tasmania.

The vendor or his agent will make freight arrangements (conditions apply).

4. Nutrition

All bulls have been fed grass with supplement silage.

5. Animal Health

- All bulls have been semen tested and had their penis and testicles examined.
- All bulls have been tested as BVD P.I. negative.
- All bulls have been vaccinated with Vibrovax, Pestigard and Ultravac 7 in 1.

6. Recessive Genetic Conditions

All lots are clearly marked with their respective genetic status.

7. Bull Guarantee

All bulls covered by the Landfall Bull Guarantee (see details on page 108 of this catalogue).

8. Joining Sires

Lots 1 – 57 have been used for joining in the Landfall herd in the Spring of 2024. Please take this into account when assessing these bulls.

9. Semen Rights

Landfall Angus reserves the right to collect any bull sold for use in the Landfall herd. Collection will be at Landfall's expense and at the convenience of the purchaser.

10. Photos and Videos

Ben Hooper from Clear Vision Imaging has captured videos of all sale lots. They will be available mid August onwards at www.landfall.com.au

11. Registrations

Please note: some lots are HBR registered and some are APR registered. All animals are eligible for transfer with their respective registration status.

12. Inspection

Bulls will be available for inspection on the morning of the sale from 10am. We welcome inspection any other time prior to the sale by appointment, please call:

Frank Archer - 0417 506 163

Ed Archer - 0417 337 144

13. Invoicing

Please note: invoicing of bulls may take up to 2-3 weeks to be processed, standard agency payment terms will still apply.

Freight (if applicable) will be invoiced separately, this may take up to 6-10 weeks after the sale to ensure all bulls are delivered prior to final invoicing.

PLEASE NOTE:

As vendors, the Archer family at Landfall want your valuable new purchase to be given every opportunity to travel and settle into their new environment with a minimum of stress.

To this end we ask you to nominate;

CLEAR DELIVERY INSTRUCTIONS.

Short notice requests for collection of animals will not be accepted.

Thank you for your co-operation.

DNA SUFFIX KEY:

The suffix displayed at the end of each animal's name indicates the DNA parentage verification that has been conducted by Angus Australia.

PV: both parents have been verified by DNA.

SV: the sire has been verified by DNA.

DV: the dam has been verified by DNA.

#: DNA verification has not been conducted.

E: DNA verification has identified that the sire and/or dam may possibly be incorrect, but this cannot be confirmed conclusively.

DISCLAIMER: Animal details included in this catalogue, including but not limited to pedigree, DNA information, Estimated Breeding Values (EBVs) and Index values, are based on information provided by the breeder or owner of the animal. Whilst all reasonable care has been taken to ensure that the information provided in this catalogue was correct at the time of publication, neither the vendor, Angus Australia or the selling agents assume any responsibility for the accuracy or completeness of the information, nor for the outcome (including consequential loss) of any action taken based on this information.

Notes

One of our proudest achievements as a seedstock business is Landfall New Ground. So consistent in his breeding with length, shape, docility and strong Angus type. He continues to sire bulls across the Angus breed in Australia that are well received by the industry. However, his true value is the maternal quality in his daughters. Four bulls sold in our Autumn sale for around the \$50,000 mark and they were all bred from New Ground daughters. He is becoming one of the all time greats of the Angus breed and is the number one sire in the world for scrotal circumference. Another quality line up of sons in this sale.

Notes

Rhynie was a revelation in our Autumn Sale earlier this year with approximately 60 sons selling to strong demand and a number of them to seedstock herds. The four sons I mentioned in New Grounds notes selling for around \$50,000 were all sired by Rhynie. In our opinion no other sire offers as much IMF in such a strong Angus phenotype. Super sound footed catalogue that are built to be deep and wide.

Notes

L519 will go down as another one of the great sires of the Angus breed. Like every other sire he is not without his weaknesses but when matched with the right type of female we love what he has done for the Landfall herd. Tremendous docility and structural integrity coupled with a well balanced data set.

Notes

A purpose sire used to manage excessive mature cow weight in particular females. He provides solid early growth but tapers off on the 600 day through to a low mature weight. Very reliable pedigree for foot structure, we see it flowing through to his progeny.

Notes

As we have mentioned previously, Pheasantry was introduced to the Landfall herd as a purpose sire to rapidly accelerate our marbling. He has certainly achieved that without destroying the fundamentals of a functional animal. A number of his sons are now starting to make a positive contribution to the Angus herd in Australia and his daughters in the Landfall herd are functional females on the point of dropping their third calf.

Notes

This sale will see us offer the first sons of Woodhill Comstock, with plenty more on the way in the future. He is a sire we have used heavily over taller and long bodied females. We expect his progeny to be thick with good muscle and shape. A high calving ease sire with a healthy balance of performance across a number of traits.

Stud stock insurance with all bulls purchased at the Landfall Angus Spring Sale

For all bulls sold in this catalogue, specialist agricultural insurer Achmea Farm insurance will provide 2 Star Mortality cover for three months (including accidental loss of use). This cover has been paid for by Landfall Angus.

At the end of the three months, if you would like to purchase cover, please contact our team who are attending the sale:
Michelle Stevens (0437 249 682) and Rebecca Muir (0437 221 914)

Our flexible options include:

- ☆ 1 Star Mortality only (including transit)
- ☆☆ 2 Star Mortality including accidental loss of use
- ☆☆☆ 3 Star Mortality including accidental loss of use, sickness and disease.

Request an appointment with us today:

www.achmea.com.au

Caring For Your Bulls

More calves, more years

Your bull is an important investment. With proper management you can achieve a longer working life from your bull resulting in more calves at a reduced cost per calf.

1. Arrival on farm

- a. Have some quiet cows or steers in the yard when the bull arrives. He will often be unsettled as he has left his mates and travelled on a truck for his first time. Give him some time to adapt to his new surroundings.

2. Pre-Joining

- a. Your new bulls will benefit from exposure to some empty cows for 2-3 weeks prior to their normal breeding period. This exposure will allow them to service some females and become exposed to any of the normal pathogens in your cow herd. If you have purchased multiple bulls, expose them only two at a time. It is then important to give your bull time to recover following the exposure period before the joining season begins.
- b. Do a pre-joining Breeding Soundness Examination (BSE) on all bulls to evaluate; structure, testicles and serving capability. This is the opportunity to identify any bull which may delay cows going in calf. Also administer booster vaccinations.

3. Joining

- a. Don't over join new bulls (maximum of 40 cows).
- b. Multi-sire join where possible to minimize the risks associated with a bull breaking down in the joining period. If you need to single sire join observe closely and rotate with a proven bull for at least 1 cycle. New bulls are the most at risk of break down, ensure you check them regularly.
- c. Most bull fertility issues develop during the joining period rather than being pre-existing problems. This means regular checking of bulls is essential (2-3 times a week for the first 3 weeks then weekly).

Check for:

- ☐ Try to observe the bull serving (mounting is not a successful serve)
- ☐ Any signs for lameness
- ☐ Evidence of penile or preputial swelling
- ☐ Any signs of ill health (lethargic, etc)
- ☐ Number of cows cycling (5% cycling per day if not in calf, this should decrease as cows conceive)

4. Post Joining

- a. Your bulls will spend most of their life in the bull paddock. You need to try minimize bull paddock injuries (bull fights) by not overcrowding the paddocks and possibly removing aggressive dominant bulls. Ensure young bulls have access to adequate feed to continue growing. Mature bulls should not be allowed to get fat, keep them in condition score 3. Mature bulls kept in body condition score 3 will have a longer working life.
- b. Pregnancy test early to identify any joining issues. This early pregnancy test will not only give you more time to make better decisions but it will also help identify the potential case of sub-fertility and allow you to prevent the problem in subsequent years.

NOTES

Understanding the TransTasman Angus Cattle Evaluation (TACE)

WHAT IS THE TRANSTASMAN ANGUS CATTLE EVALUATION?

The TransTasman Angus Cattle Evaluation is the genetic evaluation program adopted by Angus Australia for Angus and Angus influenced beef cattle. The TransTasman Angus Cattle Evaluation uses Best Linear Unbiased Prediction (BLUP) technology to produce Estimated Breeding Values (EBVs) of recorded cattle for a range of important production traits (e.g. weight, carcass, fertility).

The TransTasman Angus Cattle Evaluation is an international genetic evaluation and includes pedigree, performance and genomic information from the Angus Australia and Angus New Zealand databases, along with selected information from the American and Canadian Angus Associations.

The TransTasman Angus Cattle Evaluation utilises a range of genetic evaluation software, including the internationally recognised BLUPF90 family of programs, and BREEDPLAN® beef genetic evaluation analytical software, as developed by the Animal Genetics and Breeding Unit (AGBU), a joint institute of NSW Agriculture and the University of New England, and Meat and Livestock Australia Limited (MLA).

WHAT IS AN EBV?

An animal's breeding value can be defined as its genetic merit for each trait. While it is not possible to determine an animal's true breeding value, it is possible to estimate it. These estimates of an animal's true breeding value are called EBVs (Estimated Breeding Values).

EBVs are expressed as the difference between an individual animal's genetics and a historical genetic level (i.e. group of animals) within the TACE genetic evaluation, and are reported in the units in which the measurements are taken.

USING EBVS TO COMPARE THE GENETICS OF TWO ANIMALS

TACE EBVs can be used to estimate the expected difference in the genetics of two animals, with the expected difference equating to half the difference in the EBVs of the animals, all other things being equal (e.g. they are joined to the same animal/s).

For example, a bull with a 200 Day Growth EBV of +60 would be expected to produce progeny that are, on average, 10 kg heavier at 200 days of age than a bull with a 200 Day Growth EBV of +40 kg (i.e. 20 kg

difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

Or similarly, a bull with an IMF EBV of +3.0 would be expected to produce progeny with on average, 1% more intramuscular fat in a 400 kg carcass than a bull with a IMF EBV of +1.0 (i.e. 2% difference between the sire's EBVs, then halved as the sire only contributes half the genetics).

USING EBVS TO BENCHMARK AN ANIMAL'S GENETICS WITH THE BREED

EBVs can also be used to benchmark an animal's genetics relative to the genetics of other Angus or Angus infused animals recorded with Angus Australia.

To benchmark an animal's genetics relative to other Angus animals, an animal's EBV can be compared to the EBV reference tables, which provide:

- the breed average EBV
- the percentile bands table

The current breed average EBV is listed on the bottom of each page in this publication, while the current EBV reference tables are included at the end of these introductory notes.

For easy reference, the percentile band in which an animal's EBV ranks is also published in association with the EBV.

CONSIDERING ACCURACY

An accuracy value is published with each EBV, and is usually displayed as a percentage value immediately below the EBV.

The accuracy value provides an indication of the reliability of the EBV in estimating the animal's genetics (or true breeding value), and is an indication of the amount of information that has been used in the calculation of the EBV.

EBVs with accuracy values below 50% should be considered as preliminary or of low accuracy, 50-74% as of medium accuracy, 75-90% of medium to high accuracy, and 90% or greater as high accuracy.

DESCRIPTION OF TACE EBVS

EBVs are calculated for a range of traits within TACE, covering calving ease, growth, fertility, maternal performance, carcass merit, feed efficiency and structural soundness. A description of each EBV included in this publication is provided on pages 106 and 107.

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

CALVING EASE/BIRTH

CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.	Higher EBVs indicate fewer calving difficulties in 2 year old heifers.
GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.	Lower EBVs indicate shorter gestation length.
BW	kg	Genetic differences between animals in calf weight at birth.	Lower EBVs indicate lighter birth weight.

GROWTH

200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics or growth.	Higher EBVs indicate heavier live weight.
400 Day	kg	Genetic differences between animals in live weight at 400 days of age.	Higher EBVs indicate heavier live weight.
600 Day	kg	Genetic differences between animals in live weight at 600 days of age.	Higher EBVs indicate heavier live weight.

MATERNAL

MCH	cm	Genetic differences between animals in the height of mature females.	Higher EBVs indicate taller mature females.
MBC	score	Genetic differences between animals in the body condition of mature females.	Higher EBVs indicate more body condition of mature females.
MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.	Higher EBVs indicate heavier mature weight.
Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.	Higher EBVs indicate heavier live weight.

FERTILITY

DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.	Lower EBVs indicate shorter time to calving.
SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.	Higher EBVs indicate larger scrotal circumference.

CARCASE

CWT	kg	Genetic differences between animals in hot standard carcass weight at 750 days of age.	Higher EBVs indicate heavier carcass weight.
EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate larger eye muscle area.
Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more fat.
P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcass.	Higher EBVs indicate more fat.
RBV	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcass.	Higher EBVs indicate higher yield.
IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcass.	Higher EBVs indicate more intramuscular fat.

FEED/TEMP.

NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.	Lower EBVs indicate more feed efficiency.
Doc	%	Genetic differences between animals in temperament.	Higher EBVs indicate better temperament.

STRUCTURE

Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).	Lower EBVs indicate less curl of the claw set.
Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).	Lower EBVs indicate more heel depth.
Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).	Lower EBVs indicate a less angular leg angle.

SELECTION INDEXES

\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.	Higher selection indexes indicate greater profitability
\$A-L	\$	The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability
\$D	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting the domestic supermarket trade. Steers are either finished using pasture, pasture supplemented by grain, or grain (e.g. 50 -70 days) with steers assumed to be slaughtered at 510kg live weight (280kg carcass weight with 12mm P8 fat depth) at 16 months of age.	Higher selection indexes indicate greater profitability
\$D-L	\$	The \$D-L index is similar to the \$D index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$D aims to maintain mature cow weight, the \$D-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability

UNDERSTANDING ESTIMATED BREEDING VALUES (EBVS)

SELECTION INDEXES			
\$GN	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture grown steers with a 250 day feedlot finishing period for the grain fed high quality, highly marbled markets. Steers are assumed to be slaughtered at 800 kg live weight (455 kg carcass weight with 30 mm P8 fat depth) at 24 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability
\$GN-L	\$	The \$GN-L index is similar to the \$GN index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GN aims to maintain mature cow weight, the \$GN-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability
\$GS	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd targeting pasture finished steers. Steers are assumed to be slaughtered at 650 kg live weight (350 kg carcass weight with 12 mm P8 fat depth) at 22 months of age. Emphasis has been placed on eating quality and tenderness to favour animals that are suited to MSA requirements.	Higher selection indexes indicate greater profitability

SELECTION INDEXES			
\$GS-L	\$	The \$GS-L index is similar to the \$GS index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$GS aims to maintain mature cow weight, the \$GS-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.	Higher selection indexes indicate greater profitability
\$PRO	\$	Genetic differences between animals in net profitability per cow joined in a commercial self replacing herd based in New Zealand that targets the production of grass finished steers for the AngusPure programme. Steers are assumed marketed at approximately 530 kg live weight (290 kg carcass weight with 10 mm P8 fat depth) at 20 months of age, with a significant premium for steers that exhibit superior marbling.	Higher selection indexes indicate greater profitability
\$T	\$	Genetic difference between animals in net profitability per cow joined in a situation where Angus bulls are being used as a terminal sire over mature breeding females and all progeny, both male and female, are slaughtered. The Angus Terminal Sire Index focusses on increasing growth, carcass yield and eating quality. Daughters are not retained for breeding and therefore no emphasis is given to female fertility or maternal traits.	Higher selection indexes indicate greater profitability

Bull Guarantee

At Landfall we understand and value the economic importance of fertility within a beef herd. Empty cows are a huge cost to a producer and at Landfall we are doing our utmost to limit the unexpected outcomes in a breeding situation.

In an endeavour to provide our clients with a professional service, we have implemented this bull guarantee. It is to ensure that both Landfall and you (our valued client) have a clear understanding of each others obligations.

Our breeding bulls are assessed under a stringent set of guidelines to ensure minimal exposure of our clients to fertility issues.

- ✓ All bulls are structurally assessed and those that don't meet the specifications are culled.
- ✓ All bulls are semen tested and have their penis checked by an independent veterinarian.

At Landfall we are aware that even after these stringent tests are carried out that there is a risk that a breeding bull may still not work to their expected potential. Therefore our guarantee covers that risk; however it does not replace good management and due care by the purchaser.

GUIDELINES

Landfall guarantees breeding bulls from the date of purchase against loss of fertility due to structural failure of the bull for a period of two years. For example, corkscrew penis or bad feet. Our guarantee does not cover situations such as broken penises, prolapsed prepuce and broken legs etc.

In the event of a less than acceptable mating outcome, the bull will be assessed by a veterinarian chosen by Landfall and if the bull is found to be the cause of the infertility then Landfall will offer compensation in the form of:

FIRST YEAR

(12 month period from date of purchase)

100% of the purchase price in the form of:

- Replacement with an equivalent bull to the mutual agreement of both the vendor and purchaser.
- Credit for use with further purchases.

SECOND YEAR

(12 to 24 month period after purchase date)

50% of the purchase price in the form of:

- Credit for use with further purchases.

In the event that one of the above credits is issued it must be used within 12 months of the issue date or it will be forfeited. If a credit is issued it is non-transferable.

(The original purchaser of the bull is the only eligible party to claim a credit).

The infertile bull is then to be slaughtered with proceeds of the sale to be paid to Landfall. Landfall will cover the veterinary expenses and transport costs of the bull to an abattoir.

Landfall will not be held liable and does not offer compensation for loss of income in the event of infertility resulting in non pregnant females.

The Obligation of the Purchaser

The Landfall Guarantee is not a replacement for sound management practices. The guarantee is provided to cover the performance of the bull where breeding cows are managed to recognised industry standards. The purchaser of the bull is expected to observe joining, monitor for later cycling and record any repeat cycling in the females. If any problems arise it is expected that the purchaser notifies Landfall within 3 months, after the end of the joining period.

At Landfall we recognise there is an infertility risk involved in breeding herds. We breed our bulls so as to limit the financial and production risks involved. If for any reason there are any unexpected

outcomes with Landfall bulls we stand by our product and do not expect you the producer to have to bear the entire financial burden. If you have a problem we want to be the first to know about it. We

have confidence in our bulls and offer a commitment to our clients that our product and service is of the highest quality achievable. Your success is ultimately our success.

FREIGHT

- Free sea freight to Melbourne, Grassy and Lady Barron on all bulls sold at auction
- Free freight within mainland Tasmania on the condition that all bulls sold by auction be delivered within one week of purchase

A fond farewell to Annette after years of dedication, friendship and impact at Landfall

“Where one door closes, another opens.
But for you, Annette, the door at Landfall
will always remain open.”

— Frank Archer

Thankyou Annette

Annette and Gerald

*Annette with the catalogue design team.
Clever Creative – Isaac, Jason and Zoe*

*Annette with son Leigh
and Husband Anka at
the Landfall sale*

It was a fortuitous conversation Frank had with Annette’s son Leigh back in 2017 that led to Annette becoming part of the team at Landfall.

Annette and her husband, Anka, had planned to retire to Tasmania after many years farming in Yea, Victoria. With decades of experience in the Seedstock industry—primarily behind the scenes in record management, marketing, and sale catalogue development—Annette brought a vital skill set to Landfall at a time of growth. Yet it was her unwavering values and steadfast work ethic that truly made her an irreplaceable part of the team.

The quality of Landfall’s sale catalogues saw a sharp upward trajectory once Annette took over their development. Her dedication to producing

high-quality work on time was frequently tested by Frank’s habit of submitting content past deadline. Nevertheless, Annette always managed to meet her targets—often rallying designers and printers to go above and beyond to get the job done. Her strength lies not just in her professionalism, but in her ability to form genuine relationships. People don’t just work with Annette—they want to.

Annette was a cherished presence in the Landfall office, often syncing her lunch breaks with the team to enjoy a chat. We suspect her youthful spirit was partly fueled by living vicariously

through younger colleagues, always keen to hear the latest stories—especially when it came to football.

As she embarks on a well-deserved retirement with Anka, surrounded by children and grandchildren, we know she’ll savour many return trips to Victoria to reconnect with friends and family.

As Frank shared at her farewell gathering earlier this year:

“Where one door closes, another opens. But for you, Annette, the door at Landfall will always remain open.”

Autumn Sale 2025 Round Up

The Landfall team, back row L-R: Stephen, Chloe, Sara, Alex, Tim, Ellie, Matt, Ferghal, Lachie
Front row L-R: Gus, Katarina, Ed, Corey, Jye, Declan, Gerald, Frank

Our Autumn sale was a great success, we were proud to present a strong lineup of bulls and we want to extend a big thank you to everyone who supported us.

Whether you attended in person or bid online, you are what helps to drive the Landfall business forward. As a result, we were

able to sell 204 out of 233 bulls, averaging \$9,600 with a top price of \$54,000. We appreciate the on-going trust of in our

program and the relationships we continue to build with both new and existing clients.
