

Tarwin Poll Herefords

 AuctionsPlus™

**FEMALE
REDUCTION
SALE**

FRIDAY 21ST NOVEMBER 2025, 12PM

VIEWING DAY 14 TH NOVEMBER

TARWIN POLL HEREFORDS

David Meikle and Ann Diviny

are offering for sale their complete crop of Tarwin Poll Hereford

- **3 Year Old Cows with Calves at Foot**
 - **4 Year Old Cows with Calves at foot.**
 - **5 Year old cows with calves at foot**
 - **Joined heifers 14 to 18 months**
 - **Maiden heifers 12 to 18 months**
-
- This will be an Auctions Plus sale under the Helmsman System, bidders must be registered with Auctions Plus at least a week prior to sale.
 - The cattle will be available for inspection at their Meeniyan property on sale day and people will be able to bid on site. Staff will be present on site to assist.
 - A viewing day will also be held on the 14 th of November from 10 am to 4.00 pm for people to inspect these cattle.
 - All calves have been fully vaccinated with 7 in 1. and tested to be BVDV (Pesti Virus) non infectious.
 - Joined females will be pregnancy tested prior to sale a supplementary sheet will be available.
 - A 2% rebate is offered to outside agents introduced to the selling agents in writing 24 hours prior to the sale.

LOCAL INFORMATION

The property is located approx. a good 2 hour drive to the east of Melbourne down the South Gippsland Highway, turning off at Meeniyan heading to Dumbalk. Parrys Rd is 3km out of Meeniyan.

Within 20 minutes drive to the property, accommodation is able to be found at motels in Meeniyan, Foster and Leongatha.

The property is approx. a 15 minute drive to the Leongatha Livestock Exchange, which is well serviced by local carriers and beyond.

**BIDDERS MUST BE REGISTERED
WITH AUCTIONS PLUS PRIOR TO
SALE.**

VIDEOS WILL BE AVAILABLE EARLY NOVEMBER 2025 ON AUCTIONSPLUS

**TARWIN POLL
HEREFORDS**

FEMALE REDUCTION SALE

**FRIDAY, 21ST NOVEMBER,
2025, 12PM**

📍 200 PARRYS RD. MEENIYAN, VIC

INSPECTIONS FROM 10AM

VIEWING DAY, 14 TH NOVEMBER – 10.00AM TO 4.00PM

How to register as an AuctionsPlus user/buyer

1. To sign up to AuctionsPlus, fill in your details and create a security PIN.
2. Verify your email and phone number.
3. Follow the steps to verify your ID.
4. Enter your PIC number, ABN and business details if relevant.
5. Carefully read and accept our user rules and responsibilities.
6. Complete the user quiz.
7. Submit your request to our team.

step by step instructions

WELCOME

On behalf of Ann and myself I welcome you to this opportunity to purchase our younger proven cows and heifers both joined and unjoined.

While not ready to give up breeding poll Herefords completely, we feel it is time for us to reduce our work load and we are using this opportunity to halve the number of females we calve. Ideally, I would split the herd right down the middle however knowing the difficulty I would have in doing this, we felt it would be simpler to offer our 3, 4 and 5 year old cows with their calves at foot for your competition. With the joined heifers, I wish to keep half. Again, knowing the struggle I'd have selecting what to sell and what to keep, it seemed simpler to offer them in pairs with the purchaser selecting their choice and we keep the remainder. I have no doubt that we will be happy with these remaining heifers. The maiden heifers, we felt, needed a little more time at the time of joining. Plus we were constrained for suitable paddocks to use.

With the mild weather we had this winter, they have come on a treat and should be ready for joining when it best suits the purchaser.

This herd was started by my grandfather, Jack Meikle, with the purchase of Studlea Playmate at the 1950 Royal Melbourne Show. Playmates progeny prompted a request for his sons from local agents, in response my father and grandfather started our Tarwin Poll Hereford stud. The Tarwin River runs across the front of our property. My father Neville, went on to be a stalwart of the Poll Hereford breed in Gippsland and further afield in various roles supporting the breed.

This herd has always been focussed on the needs of commercial producers. Making best use of the tools available at the time. In the days before Breedplan and routine performance recording, we competed in carcass competitions and showed regularly across South Gippsland in support of our breed and stud. This has been a Breedplan herd since the 1980's and we have introduced the use of DNA and scanning technology as it became available. Routine practice in this herd has been the insistence on each cow rearing a calf each year under commercial conditions. We have found that our hill country tended to sort out feet and structural issues within the female herd and our lower country was strong enough to grow out and finish our bulls without resorting to supplementary feeding. This is an autumn calving herd with the females joined to calve April /May and a few in June. We have endeavoured to ensure these cattle are without health issues for the purchasers.

I would wish the purchasers of these cattle well and would be happy to answer any queries people may have.

David Meikle

EBV's are provided for the following traits:

CE DIR	The EBV for direct calving ease indicates the influence of the sire on calving ease in purebred females calving at two years of age.
CE DTRS	The EBV for daughters' calving ease indicates how easily that sire's daughters will calve at two years of age. It consists of the maternal component and half the direct component (ie CE maternal + ½ CE direct).
GL	Is an estimate of the time from conception to the birth of the calf and is based on AI and hand mating records. Lower (negative) GL EBVs indicate shorter gestation length and therefore easier calving and increased growth after birth.
BW	Is based on the measured birth weight of progeny, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.
200 Day Weight	Is calculated from the weight of progeny taken between 80 and 300 days of age. Values are adjusted to 200 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.
400 Day Weight	Is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for yearling weight.
600 Day Weight	Is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for age of dam. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.
MCW	Is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd. Steer breeders wishing to grow animals out to a larger weight may also use the Mature Cow Weight EBV.
Milk	Is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her milking ability.
SS	Is calculated from the circumference of the scrotum taken between 300 and 700 days of age and adjusted to 400 days of age. This EBV is an estimate of an animal's genetic merit for scrotal size. There is also a small negative correlation with age of puberty in female progeny and therefore selection for increased scrotal size will result in reduced age at calving of female progeny.
DC	Indicates the fertility of the daughters of the sire. It is the time interval between when the female is first exposed to a bull in a paddock mating to the day when she subsequently calves. A negative EBV for days to calving indicates a shorter interval from bull-in date to calving and therefore higher fertility.
Cwt	Is based on abattoir carcass records and is an indicator of the genetic differences in carcass weight at the standard age of 650 days.
EMA	Is calculated from measurements from live animal ultrasound scans and from abattoir carcass data, adjusted to a standard 300 kg carcass. This EBV estimates genetic differences in eye muscle area at the 12/13th rib site of a 300 kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.
Rib Fat and Rump Fat	Are calculated from measurements of subcutaneous fat depth at the 12/13-rib site and the P8 rump site (from live animal ultrasound scans and from abattoir carcasses) and are adjusted to a standard 300 kg carcass. These EBVs are indicators of the genetic differences in fat distribution on a standard 300 kg carcass. Sires with low, or negative, fat EBVs are expected to produce leaner progeny at any carcass weight than will sires with higher EBVs.
RBV	Indicates genetic differences between animals for retail yield percentage in a standard 300 kg carcass. Sires with larger EBVs are expected to produce progeny with higher yielding carcasses.
IMF	Is an estimate of the genetic difference in the percentage of intramuscular fat at the 12/13th rib site in a 300 kg carcass. Depending on market targets, larger more positive values are generally more favourable.
Accuracies	Is based on the amount of performance information available on the animal and its close relatives - particularly the number of progenies analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the "confidence level" of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives. Even though an EBV with a low accuracy may change in the future, it is still the best estimate of an animal's genetic merit for that trait. As more information becomes available, an EBV is just as likely to increase in value, as it is to decrease.

Sustainability Production Index (\$): Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing Hereford herd targeting the domestic market and with a strong focus on sustainability. Daughters are retained for breeding, so maternal traits are of importance. Steers are finished on grass until 20 months of age to target 300 kg carcasses with 10 mm P8 fat depth.

MSA Production Index (\$): Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing herd targeting higher MSA grades in the domestic market. Daughters are retained for breeding and so maternal traits are of importance. Steers are grain finished until 20 of age to target 340 kg carcasses with 12 mm P8 fat depth. A high cost is applied for cow feed costs during the annual feed shortage period which produces little change in mature cow weight.
