WELCOME

A once-in-a-generation opportunity to secure the genetics behind 77 years of Wirruna breeding.

After 77 years and three generations of Locke family stewardship, we welcome you to the Wirruna Female Dispersal. This sale marks the final chapter of a breeding program built on disciplined selection, comprehensive performance recording and an unwavering focus on commercial profitability. While the decision to disperse the registered herd has not been made lightly, we take great pride in offering the industry the very females that have established Wirruna as one of Australia's leading Poll Hereford seedstock operations.

As a foundation member of BREEDPLAN®, Wirruna has pursued a clear breeding objective: fertile, efficient cattle that calve easily, grow rapidly, thrive under commercial conditions and produce high-quality beef. Every generation has been measured, recorded and selected with profitability, balance and functionality in mind. The result is a herd recognised for calving ease, fertility, maternal strength, structural soundness and industry-leading carcase genetics. Today, Wirruna is recognised as Australasia's leading Hereford herd for marbling genetics and fertility.

This dispersal offers a rare opportunity to access breed-leading genetics from a program dedicated to balanced trait selection and the long-term profitability of commercial beef enterprises. The females on offer represent decades of disciplined breeding, objective measurement and genetic progress.

Importantly, this sale offers far more than individual animals. It provides access to proven cow families, donor females, productive young breeders and generations of maternal genetics that have been developed and retained within the Wirruna herd. Many of these females have produced sale bulls, donor daughters and replacement breeders that continue to influence herds throughout Australia and overseas.

Whether your objective is to establish a seedstock herd, strengthen a commercial breeding operation or accelerate genetic progress, we believe this sale presents a genuinely rare opportunity. The offering comprises over 600 lots, all genomically tested, including proven cows, young females, calves at foot, recipient females carrying embryo calves and proven herd sires from one of the breed's most comprehensively recorded and genetically advanced herds.

We sincerely thank the many clients, friends and supporters who have been part of the Wirruna journey. As part of the two-day program, we will also host a special Wirruna function on the Wednesday evening between sale days, and warmly invite all clients and sale attendees to join us. Please refer to the TryBooking details later in this catalogue.

We hope you can join us on 14–15 October 2026 and become part of the next chapter in the story of these genetics.

Ian & Diney Locke

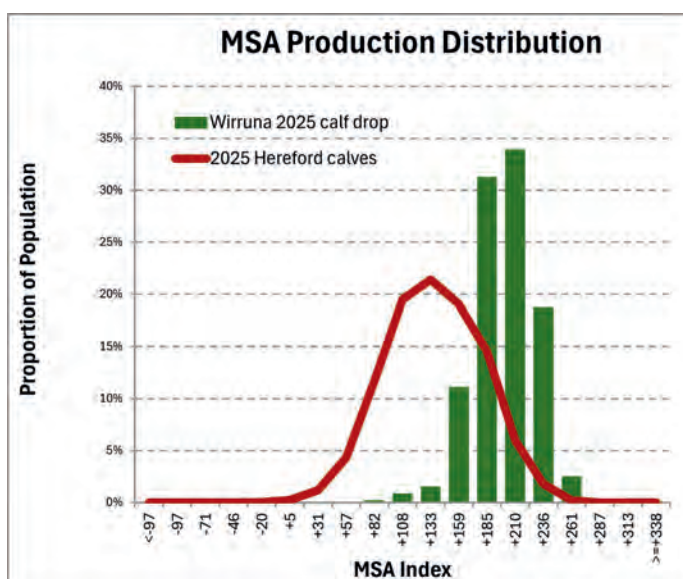

THE WIRRUNA GENOTYPE

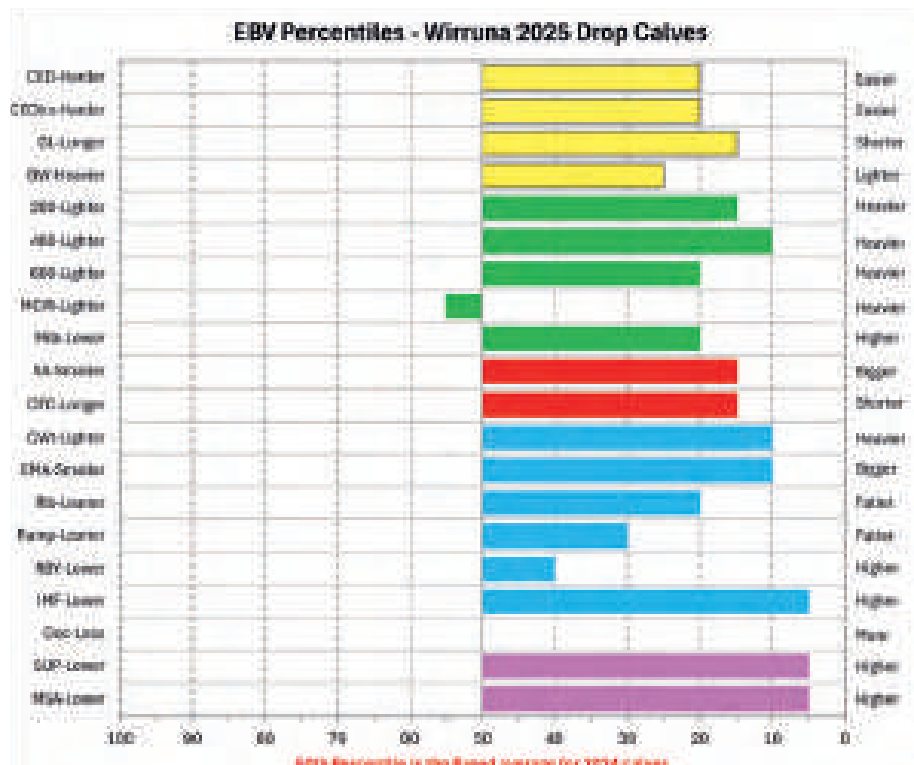

The accompanying graph provides a concise summary of where Wirruna Poll Herefords sits genetically for the major economically important BREEDPLAN® traits. The 50th percentile represents the breed average, with traits ranking further to the right indicating superior genetic performance.

The graph highlights the balanced breeding philosophy that has underpinned the Wirruna program for more than seven decades. The 2025 calf drop combines positive calving ease, short gestation, above-average growth and milk, while moderating mature cow size.

These cattle also exhibit elite fertility and strong carcass attributes, resulting in top 5% rankings for both the Sustainable Production and MSA Production Indexes.

Wirruna 2025 drop calves average in the top 5% of the breed for the \$index values.

The accompanying MSA Distribution graph further demonstrates the impact of this approach, showing a substantial shift towards higher-profit cattle compared with the breed average. These outcomes are not the result of a single sire, trait or fashionable breeding trends, but rather the accumulation of decades of disciplined selection across all economically important traits.

The result is a highly functional phenotype — cattle that are born easily, grow rapidly, mature at a moderate frame size and consistently produce well-muscled, high-quality carcasses. Just as importantly, they possess the adaptability and efficiency to perform across a wide range of commercial production systems.

Fertility remains the cornerstone of the Wurruna breeding program. For more than 50 years, only females capable of conceiving, calving unassisted and rearing a calf from a six-week joining as two-year-olds and every year thereafter have been retained in the breeding herd. This disciplined selection has created fertile, early-puberty, moderate maturity and highly functional females that thrive under commercial conditions.

SALE INFORMATION

Location

Sale to be held on-property at "Spring Valley" Holbrook. A purpose built sale complex is accessed via Spring Valley Road, 4.5km off the Hume Highway. The highway entrance to Spring Valley Rd is the first entrance north of the main property entrance. It will be well sign posted on sale day!

Sale Agents

Nutrien
Ag Solutions®

Nutrien Ag Solutions have been appointed the selling agent and will handle settlement. All lots will be governed by the usual sale terms and conditions available on sale day and displayed on AuctionsPlus.

Rebate

2% rebate is allowed for outside agents, introducing buyers in writing at least 12 hours prior to the commencement of the sale (email to office@wirruna.com) and settling within 7 days of the date of invoice.

GST

The auction will be conducted on a GST exclusive basis. GST will be added to the sale price.

New sale venue is 4.5km off the Hume Highway, accessed from Spring Valley Rd, Holbrook.

Video Auction

Open Cry Auction utilising BJS Livestock videos and interfaced with AuctionsPlus. You must be registered with AuctionsPlus to bid on-line. Visit www.auctionsplus.com.au for more information. Auction starts at 9AM.

Inspection

Sale females will be available for inspection:

- Open Day on Thursday 1st October 2026
- Pre-sale on Tuesday 13th October from 1pm
- From daylight on sale days: 14-15th October

Private inspections may be arranged anytime by appointment.

Delivery

Joe & Blake Wilton will be in attendance to coordinate deliveries. Purchasers are also free to make alternative arrangements if they wish. No deliveries will take place until on, or after, Friday 16th October 2026. Joe Wilton Mob. 0408 739 559

Catering

We invite you to enjoy lunch, morning & afternoon teas, and drinks will be available. We encourage making a donation to Holbrook Public School for their provision of labour and baked goodies.

Accommodation

Excellent accommodation is available in Holbrook and Albury

NLIS/Transfers

Wirruna will be responsible for electronic ID and at the request of the purchaser, registration transfers. Please provide PIC, and for registration transfers, HAL member number in the buyers instruction slip.

BUYER INFORMATION

To provide buyers with the catalogue early, calf details will be updated in a pre-sale supplementary sheet.

Breedplan EBVs

The EBVs in this catalogue are July 2026 Group Breedplan. With monthly updates, EBVs can & do change as more data is submitted. This can mean that EBVs at sale time may differ to that printed in this catalogue. Note that EBV accuracies are not displayed in this catalogue, to save space.

For updated EBVs & accuracies check on the HAL website - www.herefordsaustralia.com.au.

Calves at foot

All Females over two years of age will be sold with calves at foot born between late July and mid September. As calf details were unavailable at catalogue production, Expected Progeny Values (mid-parent EBVs) have been provided. Complete calf information will be included in a supplementary sheet issued prior to sale day. **Actual Breedplan EBVs will vary from expected average values.**

Preg Status

All female lots will be unjoined at sale time. Wurruna's usual joining date is 1st November.

Videos

To view on-line videos of the Sale lots, go to www.wurruna.com and follow link on the home page.

RSVP to Wurruna Function

Join us for drinks and dinner

Wednesday 14th October | 6:30pm
Holbrook Hotel - Holbrook

trybooking.com/1608055

Health

A whole-farm Biosecurity Plan is in place overseen by Vets of Holbrook Vet Centre. Available for inspection upon request.

- The Wurruna herd holds a JBAS 7 status
- all females over 24 months 7-in-1 vaccinated pre-calving in July
- 'W' heifers 7-in-1 booster & drenched in September
- Wurruna undertake an annual pestivirus vaccination program and monitor exposure
- Additionally, all 2026 calves will be tested negative as pestivirus carriers to assure their status, and that of their dam.

Genomics

Wurruna has routinely incorporated genomic testing into its breeding program for many years. Every sale animal carries a genomic profile and has been fully parent verified. Poll/Horn status is identified throughout the catalogue, with Homozygous Polled (PP) and Heterozygous Polled (PH) animals clearly designated.

At the time of catalogue preparation, all sale animals are either tested free or free by pedigree for the recognised Hereford genetic conditions DL, HY, IE and MSUD. While testing for MD and DB has been more limited within both the Wurruna herd and the wider breed, no known carriers are catalogued for sale.

Disclaimer

The vendors and their agents do not give any warranty as to errors or omissions, if any, in these particulars which they believe to be accurate when compiled. Prospective purchases should satisfy themselves by inspection or otherwise as to the accuracy of the particulars.

Any person attending the Wurruna dispersal and inspecting livestock, do so at their own risk.

THE WIRRUNA STORY

Wirruna should not be viewed as a story of tradition, but rather as a story of success through innovation.

The Wirruna Poll Hereford Stud was established in 1949 by Aubrey and Ruby Locke at "Wirruna", Holbrook.

Aubrey and Ruby Locke

Wirruna herd at "Borambola Park", 1959-1979

From humble beginnings, the herd grew to become one of Australia's most influential Poll Hereford breeding programs, spanning 77 years and three generations of Locke family stewardship.

The first registered calf, Wirruna Romeo, was born on 8 November 1949. In the early decades, the herd enjoyed considerable success in the show ring, producing numerous champions and exporting live animals to countries including New Zealand, Kenya, Chile, Japan and England. Notable achievements included Wirruna Attila being crowned Supreme Champion All Breeds at the 1967 Sydney Royal and progeny of Wirruna Diamond winning three All Breeds Champion Steer titles at Sydney Royal.

Wirruna Attila-Supreme Champ 1967 Sydney Royal

The defining chapter of the Wirruna story began in the early 1970s when Richard Locke made the courageous decision to move away from show-ring selection and focus instead on performance-tested cattle bred under commercial conditions. At a time when few seedstock producers embraced objective measurement, Richard became a pioneer of performance recording and was heavily engaged in the development and validation of what would become BREEDPLAN®, launched nationally in 1985.

Richard Locke - Stud Principal 1971-2000

This philosophy centred on a simple belief: commercial cattle producers are paid for kilograms of quality beef produced efficiently, not for show-ring success. Wirruna therefore focused on fertility, calving ease, growth, carcase merit and structural soundness, with cattle raised and selected under grass-fed commercial conditions.

L-R Sandi Gadd, Phil Holmes-Consultant, Don Gadd (Orange Grove Murray Greys), Lucinda & Bryan Corrigan (Rennylea Angus), Murray & Carrol Garnock (South Bukalong Herefords) Ian, Richard & Didee Locke

The formation of Performance Plus Beef Breeders in 1992 further strengthened this direction. Together with a group of progressive seedstock producers from several breeds, Wirruna helped educate commercial producers on the value of objective performance recording and genetic selection. Industry recognition followed, including the National Seedstock Producer of the Year Award in 1995, the NSW Seedstock Producer of the Year Award in 2002 and the Beef Improvement Association Fellowship awarded to Richard Locke in 2001.

Locke family receiving 1995 National Seedstock Producer of the Year award

The next chapter commenced in 1994 when Ian Locke joined the management of the herd, becoming the third generation of the family involved in the stud. Together with Diney, Ian expanded the enterprise from approximately 150 breeding females to more than 600, while increasing annual bull sales from around 30 to more than 200 bulls.

Throughout this growth, the commitment to objective measurement, disciplined selection and commercial relevance never changed.

L-R Diney, Henry, Annabel & Ian Locke - Feb 2005

A hallmark of Wirruna's longevity has been its willingness to embrace innovation. From the earliest adoption of performance recording and BREEDPLAN®, through to genomics, carcase scanning, fertility & structural assessments, utilising Matesel, involvement in industry research, and use of bull supply contracts, the herd has consistently remained at the forefront of technologies that improve the profitability of commercial beef production for clients.

Today, the genetics offered in this dispersal represent the culmination of more than seven decades of disciplined breeding decisions. While technologies have evolved, the fundamental objective has remained unchanged: fertile, functional cattle that calve easily, thrive under commercial conditions and produce profitable, high-quality beef.

BREEDPLAN EBVS

Wirruna has over 19,000 cattle recorded on Breedplan

Calving Ease	Trait	Description	Interpretation
	CE Dir (%)	Genetic differences in the ability of a sire's calves to be born unassisted from 2 Y/O heifers	Higher EBVs suggest fewer calving difficulties in bulls' progeny
	CE Dtrs (%)	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age	Higher EBVs suggest fewer calving difficulties in replacement daughters
	GL (Days)	Genetic differences between animals in the length of time from date of conception to birth of the calf	Lower EBVs indicate shorter gestation length & easier calving
	BW (kg)	Genetic differences between animals in calf weight at birth	Lower EBVs indicate a lighter birth weight
Growth	200D (kg)	Genetic differences between animals in live weight at 200 days of age	Higher EBVs indicate a heavier weaning weight
	400D (kg)	Genetic differences between animals in live weight at 400 days of age	Higher EBVs indicate a heavier yearling weight
	600D (kg)	Genetic differences between animals in live weight at 600 days of age	Higher EBVs indicate a heavier final weight
	MCW (kg)	Genetic differences between animals in live weight of cows at 5 years of age	Higher EBVs indicate a heavier mature weight & higher maintenance requirements
	Milk (kg)	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam	Higher EBVs indicate higher milk in daughters
Fertility	SS (cm)	Genetic differences between animals in scrotal circumference at 400 days of age	Higher EBVs indicate higher male semen quality & quantity
	DtC (Days)	Genetic difference in time between start of joining period until subsequent calving	Lower EBVs indicate shorter time to calving & higher female fertility

The Hereford GROUP BREEDPLAN Estimated Breeding Values contained in this sale catalogue were compiled by *Agricultural Business Research Institute (ABRI)* from data supplied by breeders. Neither Herefords Australia Ltd nor ABRI oversee or audit the collection of this data

	Trait	Description	Interpretation
Carcase	CWT (kg)	Genetic differences between animals in hot standard carcase weight at 650 days of age	Higher EBVs indicate a heavier carcase weight
	EMA (cm ²)	Genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase	Higher EBVs indicate better muscling
	Rib Fat (mm)	Genetic difference between animals in fat depth at the 12/13th rib site in a 300kg carcase	Higher EBVs indicate more subcutaneous fat at loin
	Rump Fat (mm)	Genetic differences between animals in fat depth at the P8 rump site in a 300kg carcase	Higher EBVs indicate more subcutaneous fat at rump
	RBV (%)	Genetic differences between animals in bone out saleable meat from a 300kg carcase	Higher EBVs indicate a higher yielding carcasses
	IMF (%)	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 300kg dressed carcase	Higher EBVs indicate higher marbling carcasses
Other	DOC (%)	Genetic differences in animal temperament	Higher EBVs suggest a better temperament
	NFI-F (Kg/Day)	Differences in animal feed intake (Feedlot Finishing) at a standard weight and a rate of weight gain when animals are in a feedlot finishing phase	Lower EBVs indicate higher feed efficiency - eat less feed/day for a standard weight gain

	Trait	Description	More Information
Index	SUP (\$)	Sustainability Production Index. Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing Hereford herd targeting the domestic market and with a strong focus on sustainability. Steers finished on grass, slaughtered at 20 months of age to produce 300kg carcasses with 10mm P8 fat depth	 SCAN ME
	MSA (\$)	MSA Production Index. Estimates the genetic differences between animals in net profitability per cow joined in a commercial self-replacing Hereford herd targeting higher MSA grades in the domestic market. Steers are grain finished until 20 months of age to target 340kg carcasses with 12mm P8 fat depth

	PP

Dam of the HAL Super Sire Wirruna Steakout S457, renowned for his calving ease and elite marbling. A panda-eyed matron with exceptional body depth and capacity.

Still ranking in the top 10% for \$Indexes as a rising seven-year-old, she offers a good trait balance. Her mating to Unbeatabull U149 will work on paper and in the paddock.

- ✓ We used the QP Rival sire to capture his beautiful body type and easy-fleshing ability, combined with donor cow S330, who adds strong milk, growth, and solid carcass performance.
- ✓ Full embryo sisters are represented in Lots 306 and 331, with half sisters in Lots 193 and 285. These two embryo lots offer very similar, high-quality prospects.

- Secure progeny from one of the breed's elite matings - US sire Houston has over 3,000 recorded progeny and topped the 2021 Sandhill Farms Sale.
- T082 (Lot 59) is a highly regarded donor female within the Wirruna program - her influence is evident through outstanding daughter V035 (Lot 509) and the promising young sire W515.
